

Security Consulting Services

Helping business leaders manage risk while accelerating their businesses

Enterprises of all sizes face many challenges as they seek to minimize information security risk. The protection of critical information assets is sometimes perceived as ineffective and costly. Demonstrating compliance with multiple global regulations can still be a frustrating, repetitive, and manual process. These factors contribute to a perception that security is a business inhibitor rather than a business enabler. What is needed is an information-centric perspective that aligns security with your business objectives by following the information to determine what's worth protecting, where the risks are, and how to best prioritize security investments to accelerate your business.

By using a proven framework that leverages best practices, methodologies, and industry standards, EMC® Consulting helps you identify, remediate, and manage information security risks while increasing the efficiency and effectiveness of your overall security program.

Security services from EMC Consulting can help by using an information-centric approach to risk management that holistically focuses on your information security challenges in the critical areas of business, operations, and technology. This approach aligns information security to your business objectives, helps protect your information assets, and eases the burden of regulatory compliance. The result is a highly effective, information security infrastructure that responds quickly to business changes with optimized policies, procedures, metrics, and controls.

Aligning security program with your business objectives

Mapping policies, metrics, and procedures to operational best practices

Leveraging best-of-breed technology to reduce risk

Security Consulting Services

Security services in the EMC Consulting portfolio help you assess, remediate, and manage your information security risk in alignment with your business risk profile. Other services help you establish governance for your information security program, while reducing the cost and complexity of regulatory compliance.

Service	Requirement	Description
EMC Security Assessment for Virtualized Environments	Security and network managers need to understand that certain unique situations for virtual environments require additional security measures, such as virtual machine mobility and transience, and difficulty maintaining configuration compliance for PCI.	The EMC Security Assessment for Virtualized Environments reviews security measures in place within your virtual environment, compares them to best practices, and makes recommendations for achieving the desired state.
EMC Classification for Information Security	Whether data is confidential, proprietary, or regulated, enterprises need to understand what they have, its value and location, and how it should be protected.	The Classification for Information Security service helps catalog all business information while identifying value, sensitivity, and protection requirements.
EMC Assessment for Storage Hardening	Enterprises need to expand their security strategies beyond network perimeter defenses to include addressing security concerns across their storage infrastructures.	The Assessment for Storage Hardening service helps you improve protection of business-critical information by appraising the security of your entire storage infrastructure.
EMC Information Risk Assessment	Enterprises require an information security strategy that is based on a comprehensive understanding of information assets, threats to those assets, current remediation controls, and the resulting risks.	The Information Risk Assessment service is a broad-based security posture assessment that is designed to provide a systematic overview of your information security capabilities and a road map for risk remediation.
EMC Security Strategy Services	Enterprises need customized strategies to plan for new and powerful technologies for user authentication, data protection, and data loss prevention.	The EMC Security Strategy service helps you develop strategies for authentication, encryption, and data loss prevention.
EMC SIEM Strategy Development	Enterprises need a Security Information & Event Management (SIEM) strategy to map events to responses and reporting.	The SIEM Strategy Development service captures business requirements for event monitoring and reporting into a coherent set of goals, objectives, and standards used throughout the organization.
EMC Policy Development for Information Security	Enterprise information security policies need to be comprehensive and well designed in order to ensure compliance with all internal and external mandates.	The Policy Development for Information Security service helps you with defining and mapping policies to best practices, individual business requirements, and appropriate regulations.
EMC Program Development for Information Security	Enterprises need to approach information security in a programmatic manner that reflects corporate governance decisions and incorporates the key aspects of people, process, and technology throughout the enterprise.	The Program Development for Information Security service leverages your existing security capabilities, policies, staff, organization, and controls to help you improve the maturity of each element.

Why EMC

As part of the world's leading developer and provider of information infrastructure technology and solutions, EMC Consulting transforms information into business results. Our consultants bring a unique mix of industry, business, and technology expertise to solve today's toughest challenges. We use field-tested tools, proven methodologies, best practices, and industry standards to minimize risk and optimize time to value in our engagements. We provide a full range of consulting, design, implementation, and support services.

EMC Consulting helps customers to cost-effectively secure critical information assets throughout the information lifecycle.

Working with RSA®, The Security Division of EMC, EMC Consulting offers industry-leading services and solutions to bring trust to millions of user identities, the transactions that they perform, and the data that is generated.
